The screenshot shows the Netgear ReadyNAS 2100 web interface. The top navigation bar includes 'Clock', 'Alerts', 'Performance', 'Language', 'Update', 'Config Backup', 'Power', and 'Shutdown'. The 'Power' tab is selected. The left sidebar shows a menu with 'System' expanded, listing 'Clock', 'Alerts', 'Performance', 'Language', 'Update', 'Config Backup', 'Power', 'Shutdown', 'Status', and 'Add-ons'. The main content area is titled 'UPS Configuration' and contains the following text: 'This device is not physically monitoring a UPS. You may choose to monitor a UPS connected to a remote ReadyNAS. On receiving a low battery event, this ReadyNAS will shutdown gracefully.' Below this text are two configuration sections. The first section has a checkbox labeled 'Enable monitoring of UPS physically attached to a remote ReadyNAS' and a text input field for 'Remote IP address:'. The second section has a checkbox labeled 'Monitor UPS over SNMP' and two input fields: 'SNMP UPS address:' and 'Use MIB: Auto'. Below the UPS configuration is a section titled 'Wake-on-LAN' with the text: 'You can power-on this device remotely by sending it a "WOL Magic Packet" if the WOL service is enabled.' At the bottom of the interface, there are buttons for 'Switch to Wizard Mode', 'Register', and 'Apply'. A status bar at the very bottom shows the date and time 'Wed Dec 14 08:59:41 2011' and several status indicators: 'Volume: ●', 'Disk: ●', 'Fan: ●', 'Temp: ●', and 'UPS: ○'. The footer text reads 'Copyright © 1996-2011 NETGEAR © | RAIDiator 4.2.19'.

The screenshot displays the Netgear ReadyNAS 2100 web management interface. The top navigation bar includes 'Clock', 'Alerts', 'Performance', 'Language', 'Update', 'Config Backup', 'Power', and 'Shutdown'. The 'Power' tab is currently selected. On the left, a sidebar menu shows 'System' as the active section, with sub-items like 'Status' and 'Add-ons'. The main content area is titled 'UPS Configuration' and contains the following text: 'This device is not physically monitoring a UPS. You may choose to monitor a UPS connected to a remote ReadyNAS. On receiving a low battery event, this ReadyNAS will shutdown gracefully.' Below this text are two configuration sections. The first section has a checkbox labeled 'Enable monitoring of UPS physically attached to a remote ReadyNAS' which is unchecked, followed by a 'Remote IP address:' label and an empty text input field. The second section has a checkbox labeled 'Monitor UPS over SNMP' which is also unchecked, followed by an 'SNMP UPS address:' label and an empty text input field, and a 'Use MIB:' dropdown menu currently set to 'Auto'. At the bottom of the main area, there is a 'Wake-on-LAN' section with the text: 'You can power-on this device remotely by sending it a "WOL Magic Packet" if the WOL service is enabled.' The footer of the interface shows 'Switch to Wizard Mode', 'Register', and 'Apply' buttons, along with a timestamp 'Wed Dec 14 08:59:41 2011' and system status indicators for Volume, Disk, Fan, Temp, and UPS. A copyright notice at the very bottom reads 'Copyright © 1996-2011 NETGEAR © | RAIDiator 4.2.19'.
